The Sceptical Chymist, Wikipedia

n

Democritus was a pre-Socratic philosopher, born in Abdera, Thrace, around 460 BC. He was a pupil of Leucippus, the inventor of atomism. He is known for his theory of atoms and void, and for his skeptical philosophy. He believed that all things are composed of atoms and void, and that the atoms are in constant motion. He also believed that the soul is composed of atoms, and that the mind is a function of the atoms. He is known for his saying, "Nothing is real, nothing is certain, and nothing is true."
